Disc of the Dead – Horror Movie Catalogue

Project Overview

Disc of the Dead is a horror movie catalogue website that displays films based on an external API for a webshop. The project allows users to browse horror movies, view movie details, and explore a dark themed interface designed to match the genre. The goal of the project was to practice working with APIs, JavaScript functionality, and responsive layouts.

Technologies Used

Figma
HTML
CSS
JavaScript
Responsive design
GitHub Pages

Features

Movie catalogue displaying horror films
Individual movie detail pages
Data fetched from an external API
Responsive layout for desktop and mobile
Dark theme design to match the horror genre

Challenges

One challenge in this project was fetching and displaying movie data from the API in a structured way. Ensuring the data loaded correctly and displayed consistently across different screen sizes required careful testing and debugging. Also eliminating that whenever you clicked on a movie, the information for a different random movie would appear instead.

Future Improvements

Add search functionality for movies
Add filtering by genre or rating
Improve loading states while fetching data
Enhance UI animations and transitions
Add user favorites or watchlist functionality
