RainyDays – Outdoor Clothing Webshop

Project Overview

RainyDays is a responsive e-commerce style website for an outdoor clothing brand. The project focuses on displaying jackets with product pages and a clean shopping interface. The goal of the project was to practice responsive design, layout structure, and building a user-friendly web experience.

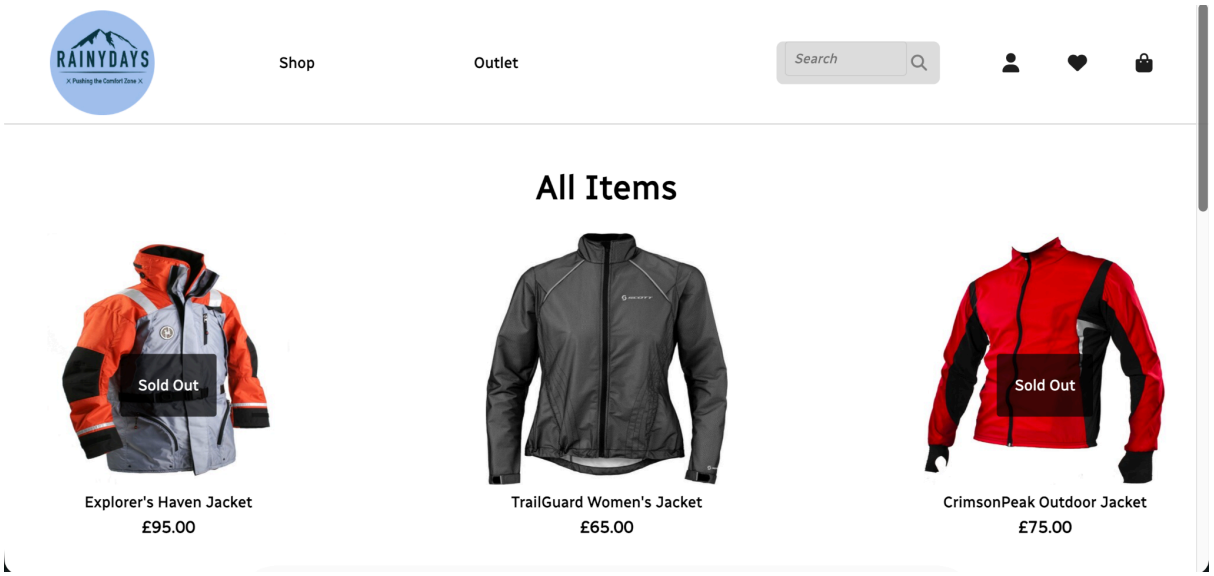
Technologies Used

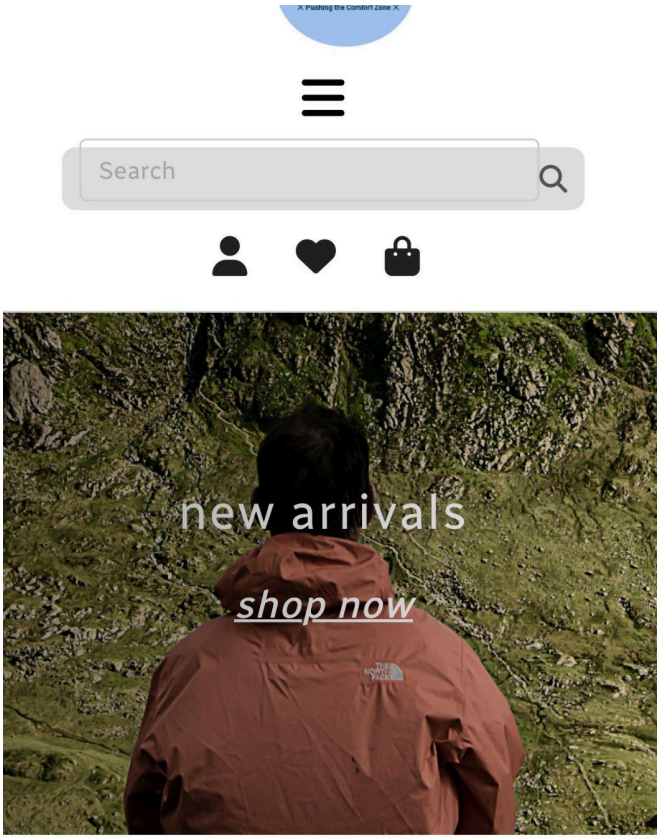
Figma
HTML
CSS
Responsive design
GitHub

Features

Responsive layout for desktop and mobile
Product listing page
Individual product detail pages
Navigation menu
Product images and descriptions

Screenshots





Challenges

The biggest challenge I had creating this project was the dropdown menu and getting it in front of the pictures.. Another challenge I had during this project was structuring the layout so that it remained responsive across different screen sizes. Adjusting the grid and spacing required testing and refining the CSS to ensure a consistent layout on both desktop and mobile devices.

Future Improvements

Add a shopping cart system
Improve accessibility features
Add filtering and sorting options
